/Thomas E. Denion/			

Continuation of 11. does NOT place the application in condition for allowance because: applicant has not amended the claims and the arguments with regards to 35 U.S.C. § 103 (a) where not persuasive.

With regard to the \$112 1st Paragraph rejection of claims \$14-35, the applicant's arguments on Page 2 are persuasive. With regards to the \$5 U.S.C.\$ \$103 (a) rejection based on BISHOP (WO 890)6822) the arguments are not persuasive. Applicant argues that BISHOP teaches away from machining at one time a portion of the side face of the scroll extending substantially the height of the scroll ways. The Examiner disagrees. BISHOP teaches that a part can be machined at one time by Hale machining as pointed out by the applicant on Page 4, however, machining at one time is not a desirable method due to the side forces exerted on the scroll. Because a form of machining is not a preferred method does not mean that the reference teaches away from using such a method. Furthermore, BISHOP teaches end milling the entire length of the scroll wrap in one pass. One of ordinary skill in the art would have tried to machine in one pass, in order to reduce the machining time since only one pass of the tool would be required. Machining no pass are the tool with the preference to the pass of the tool would be required. Machining to no pass end the top he past of the tool would be required. Machining to pass are the tool was a scroll wrap to machine at one time substantially the height of the scroll wrap.
